

Investor's Quick Overview of Hydrol-Pro

Hydrol-Pro designs and makes machines that are a chemical pressure cooker to liquefy dead animals for elimination of any infection and convert the mixture into fertilizer and fuel. Various sizes are provided and prices per system vary from \$250,000 to over \$1,500,000. The company also makes large sterilization systems used to decontaminate waste water coming from research laboratories. Hydrol-Pro has profitable revenue in 2008, and a backlog of systems under construction with a huge number of future opportunities already identified and quoted. Hydrol-Pro is ahead of their competition technically and there are only 3 companies in this business presently, all with sales under \$10 Million in this rapidly growing market. Present orders are in USA and Canada, with many inquiries coming in from around the world.
